

# Find the flowers

**Flowers aren't just pretty. They're useful too! Bees feed on flowers and pick up a material called pollen at the same time. They spread the pollen all around, helping to grow the crops that we eat.**

There are nearly 100 types of plants and flowers on the Grey to Green trail. See how many of these 5 flowers you can spot. Look carefully — some might be hidden amongst friends of all different colours.

Which was your favourite flower? Draw it here...

**Allium Moly**

Long green leaves and star-shaped, yellow flowers with 6 petals

Season: early summer

**Dianthus Cruentus**

Tall stems topped with clusters of red-pink flowers

Season: spring/summer

**Narcissus Poeticus Recurvedus**

Wide, star-shaped, bright white flowers with small, red-lined yellow cup at the centre

Season: late spring

**Calamintha 'Blue Cloud'**

Mounds of green covered in small, soft blue flowers

Season: summer/autumn

**Allium Sphaerocephalon**

Egg-shaped heads of green and maroon flowers on tall, leafless stems

Season: summer

**Now, try and say each flower's name out loud. (Some of them are real tongue-twisters!)**
